# Experience

### Founder & Lead Developer
DogeCash LLC
2022 – currently

I co-founded DogeCash, a simple-to-use staking app that raised $75k in pre-seed capital. Currently, we have over 6000 monthly active users and a team of 3 people.

At our peak, we had a team of 7 people, with 4 of them being developers (2 frontend and 2 backend), and I served as the lead developer.

The infrastructure we use, which I currently maintain, is as follows:

- **Backend**: Laravel 10, MariaDB and Redis.

- **Frontend**: Angular 16

- **iOS and Android App**: Capacitor 5

- **Server structure:**

  - **Master Server:** A write-only Laravel/MariaDB/Redis instance running on a monstrous dedicated server (Intel Xeon E5-1630v3 - 4 c / 8 t - 3.7 GHz / 3.8 GHz 64 GB DDR4 ECC)

  - **Dynamic Slave Servers:** Using Hetzner API (our cloud provider) we deploy read-only Laravel/MariaDB slave instances to keep up the demand of users.

This infrastructure model enables us to quickly scale up or down based on demand. At our peak, we seamlessly served over 1200 simultaneous users.

You might be wondering why I'm creating this CV if everything is going so well at DogeCash. Well, that's not the full picture.

Despite our impressive user metrics, we're facing challenges in monetizing the app.

We are working diligently to reduce our costs, which has included parting ways with four team members in recent months. At the moment, I am also exploring opportunities to reduce my own salary by seeking additional employment.

This is your chance to secure a senior developer with extensive experience in team management and scaling projects from the ground up, all at a discounted rate.

## Experience

### Frontend & Backend Developer
Flits App

2020 – 2022

I joined Flits App at the peak of the pandemic. It marked my introduction to the world of crypto, as I shifted my focus away from corporate clients.

As a very small startup, my roles were quite varied and dependent on the company's needs.

However, my day-to-day responsibilities primarily revolved around maintaining the Laravel backend infrastructure that catered to over 50,000 monthly users. But I also did:

- **UI design and frontend development**. Using VUE and Figma, I made from scratch a proposal for the new Flits landing page: https://flits.weoka.pro

- **C++ Development:** C++ is not my strength, but I helped with some contributions to the core of Flits developed in C++.

- **Customer Support:** Even though Flits had a dedicated support team, at peaks I helped with technical issues, having direct contact with users.

### Frontend & Backend Developer
2BE Studios

2019 – 2020

2BE Studios is a contractor and design studio. During my time there, I had the pleasure of collaborating with companies of all sizes and from diverse backgrounds.

While I can't disclose specific company names and tasks, the majority of my work revolved around designing and maintaining backend interfaces.

I also had the opportunity to engage in frontend development using frameworks such as Vue and Angular.

### Frontend & Backend Developer
Freelancer.com

2017 – 2019

While working as a freelancer, I had the opportunity to learn from esteemed international companies, including Inspection Manager and NASA (through the NASA tournament challenges posted on Freelancer.com).

I also collaborated with smaller clients, such as Tiletouch, an e-commerce platform specializing in tile sales, with a customer base exceeding 30,000 monthly users.
